Think of an invention. Why would you use the LoRa network.

4 responses

You can use the LoRa network for many things. For example, you can use the LoRa network for metering, environment, cities, and industrial control. The LoRa network would be a good choice for these because of the long range, low power consumption, and secure data transmission.

An invention would be flying cars. I would use the LoRa network to monitor and control the car.

LoRa network could be used in cities, environment, metering and many more. I would use LoRa network to monitor and control any device that's connected to the Internet of Things is going to connect the world and create lots of efficiencies and new business opportunities.

I would use the LoRa network for long range communications.
